DETAILED ACTION***Allowable Subject Matter***

1. Claims 1, 4-8, 9, 12-15, and 16, are allowed.
2. The following is a statement of reasons for the indication of allowable subject matter: The prior art, Microsoft Word 2000 (Word 2000), teaches a method for creating a web in the environment of a word processing module. A template may be selected by a user, said template determines the basic structure for a document and stores document settings such as AutoText entries, fonts, key assignments, macros, page layout, and styles. Furthermore, a user can preview and apply different styles by using the style gallery. The reference fails to explicitly teach accessing a markup language software module, naming the style group from within the markup language software module, and locating the template that is to be associated with the style group from within the markup language software module. The reference lacks the markup language software module, which performs the association by locating the template belonging to a word processing software module that is to be associated with the style group or template belonging to the markup language software module. The reference, QuarkXPress, provides a markup language software module for automatically converting documents into HTML web pages. Furthermore, QuarkXPress teaches accessing selected styles from layout or word processing programs and storing these accessed styles from the word processing software application in the Multi Style II modules for subsequent use. However, the reference fails to explicitly teach or suggest accessing a markup language software module, naming the style group from within the markup language software module, and locating the template that is to be associated with the style group from within the markup language software

module based upon a template of the word processing software module. The limitations when read as a whole are not shown in the prior art of record and would not have been obvious to one of ordinary skill in the art to have combined the prior art of record to come up with applicant's claimed invention.
